-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 May 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 18, 19, 27-29, 31-35, 38-40 and 42-46 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 18 and 19 is/are allowed.
- 6) ☒ Claim(s) 27-29, 33-35, 38-40 and 44-46 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ 6) ☐ Other: _____

Art Unit: 2173

DETAILED ACTION

Reopening of Prosecution

In view of the amendment filed on 10 May 2004, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 27-29, 31-35, 38-40, and 42-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,119,152 (Carlin et al) and "Domain Names - Concepts and Facilities" (RFC 1034).

Referring to claims 27 and 38, Carlin discloses in column 2: lines 10-38 a multi-provider online sales system, wherein a plurality of service providers are each allocated a subset of subscriber features and a customized user interface. Figures 3a-3j illustrate the user interface provided by the multi-provider online sales system, which allows each service provider to build a customized sales interface. In column 5: lines 16-42, Carlin further discloses that each subscriber of a service provider sees the associated online service as independent even though the server providing the interface is maintained by the multi-provider online sales system. In column 1: lines 19-27, Carlin explains that online services can operate over a TCP/IP network.

Best Available Copy

Art Unit: 2173

This embodiment would further require that each sales interface and the host computer be located at a unique network address. Carlin fails to specifically disclose, though, that the sales interfaces operate at different domains. However, one of ordinary skill in the art would have been motivated to map each interface to a different domain because of Carlin's suggestion in column 8: lines 54-56, which says that it should appear to the subscriber that he or she is connected to an online service that is administered by that service provider. One method for providing such an appearance is through the use of subdomains. RFC 1034, published by the Network Working Group in 1987, describes how the domain hierarchy works on page 8:

A domain is identified by a domain name, and consists of that part of the domain name space that is at or below the domain name which specifies the domain. A domain is a subdomain of another domain if it is contained within that domain. This relationship can be tested by seeing if the subdomain's name ends with the containing domain's name. For example, A.B.C.D is a subdomain of B.C.D, C.D, D, and “ ”.

Each service provider in Carlin's invention can thus be a subdomain of the domain operated by the multi-provider online sales system. If, for example, the primary domain was multi-provider.com, a plurality of service providers could be mapped to provider1.multi-provider.com, provider2.multi-provider.com, and so on. The service providers' interfaces can then be operated by a single sever while creating the impression that they are operated by unique domains. Subdomains, however, need not necessarily be operated by a single server. After all, yahoo.com and google.com are both subdomains of the .com domain, but are operated by different servers. Accordingly, each service provider can have its own subdomains that are operated by unique servers. For example, site1.provider1.multi-provider.com and site2.provider1.multi-provider.com can be operated by a server that is separate from the one that operates provider1.multi-provider.com and provider2.multi-provider.com. Links can then be created from pages on one server to pages on another server wherein both sets of pages are mapped to the

Art Unit: 2173

same parent domain. The examiner thus submits that it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a hierarchy of domains and subdomains as taught by RFC 1034 in combination with the teachings of Carlin so as to anticipate the claimed invention. As suggested by Carlin, such a combination would have been advantageous because it would allow the multi-provider online sales system to maintain the impression that each sales interface is operated by its respective service provider and not by a single common entity.

Referring to claims 28 and 39, the teachings of RFC 1034 are all associated with the Domain Name System (DNS). The mapping of different sites is thus performed via DNS mapping.

Referring to claims 29 and 40, Carlin discloses in Table 1 a plurality of services that can be offered via the customized user interfaces, and are inherently presented on different pages linked by the menu structure illustrated in Figure 3j.

Referring to claims 31, 32, 42, and 43, Carlin and RFC 1034 fail to explicitly disclose that the first sales interface includes elements that are also included in the first set of pages and that the second sales interface includes elements that are also included in the second set of pages. However, the examiner submits that it is notoriously well known in the state of the art that pages mapped to the same domain commonly reuse graphical interface elements such as headers, banners, menus, links, and backgrounds so as to maintain a common look and feel when navigating amongst pages. The examiner takes OFFICIAL NOTICE of this teaching. Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include common interface elements among the first and second sales

Best Available Copy

Art Unit: 2173

interfaces and their respective sets of pages in order for the multi-provider online sales system to maintain the impression that each sales interface and its associated pages is operated by its respective service provider.

Referring to claims 33 and 44, Carlin and RFC 1034 fail to explicitly disclose that sales interfaces include interface elements comprising at least part of their respective domain names. However, the examiner submits that it is notoriously well known in the state of the art that parts of the domain names are typically indicative of the respective service provider's name (e.g. Amazon.com), and are thus very commonly included in sales interfaces. The examiner takes OFFICIAL NOTICE of this teaching. Furthermore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include part of the domain name in a user interface as a mechanism for associating the domain name with the name of the service provider. Such an association makes it easier for users to remember a network address and navigate to a service provider's sales interface.

Referring to claims 34 and 45, Carlin explains in column 2: lines 10-20 that the invention is a multi-provider on line service allowing a plurality of service providers to uniquely configure the appearance of their respective user interfaces. Each of these service providers can inherently belong to different legal entities.

Referring to claims 35 and 46, as discussed above, Carlin and RFC 1034 disclose a host server and a plurality of sales interfaces that provide the impression that they are being operated by different entities. In Figures 3a-3j, Carlin illustrates a customization interface responsive to user input to define the sales interfaces. As mentioned above, Carlin explains in column 8: lines 54-56, that from the subscriber's standpoint, it should appear that he/she is connected to an

Best Available Copy

online service which is administered by that service provider. Additionally, Carlin explains in column 4: lines 37-51 that service providers can upload data for access solely to its own subscribers. Therefore, it is implied that the customization interface is operative to provide different headers for each sales interface.

Allowable Subject Matter

Claims 18 and 19 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: In combination with the claimed subject matter, the prior art does not teach or fairly suggest providing individual specification elements for each category or providing attributes to indicate that a category is unused. The closest prior art, Carlin et al, teaches a multi-provider sales system with which a plurality of service providers can build customized sales interfaces.

Response to Arguments

Applicant's arguments with respect to claims 27-29, 33-35, 38-40, and 44-46 have been considered but are moot in view of the new ground of rejection.

Conclusion

The prior art made of record on form PTO-892 and not relied upon is considered pertinent to applicant's disclosure. Applicant is required under 37 C.F.R. § 1.111(c) to consider this reference fully when responding to this action. The document cited therein provides further information regarding domains and domain names.
